Client Testimonial

How long have you been with Xenex?

Since 2010.

What's the biggest difference?

Now that Xenex is looking after our system, it just works. It's stable and reliable, and does what we want it to do.

What do you like best about dealing with Xenex?

At Xenex, they listen to what we want, and make it happen. I don't have to think about it. Just as importantly, if ever we've had an issue, they've resolved it.

From installing Microsoft servers and providing telephone systems, to offering data back-up and more, Xenex Systems can look after your IT needs 24/7/365.

See over for more information.

Solutions

Managed IT Service - we'll keep your IT systems working whilst assisting with improvements and expansion. By managing your IT environment, we save your business time and money, offering you access to 24/7 support.

IP Telephony (VOIP) Systems - cloud-based phone systems offer high quality calls, save money on call costs and eliminate the need to maintain, support and replace onsite phone systems.

Unified Communications - we'll integrate all your communications using real-time communications tools. Enhancing business communication and collaboration will increase your business productivity.

Cloud Hosted Services - we offer hosted services for Virtual machines as well as the option of a secure location to house your server away from your business premises. Secure, highly reliable and easy to expand, this is very cost effective.

Disaster & Data Recovery - we'll assess your current system, identify any risks and set up a disaster plan. We assist with recovery of data and repair of Microsoft Windows Server and Desktop operating systems.

Data Back-up Management - we'll protect your data with backing up your Windows Server and desktops. We monitor this for you, and provide restoration of data if required.

Microsoft Office 365 - moving to the cloud for email and office applications provides stability for your business, gives you access to business information from anywhere, and can save on capital expenditure.

Internet & NBN - the NBN is a key enabler for cloud-based services, opening up a range of opportunities that Australian businesses previously didn't have access to.
